

## Ducting Alternatives

**Metal Ducting** – Traditional metal ducting is found in a vast majority of the areas homes and businesses. Make sure that all joints of this type of delivery system is sealed with mastic to reduce leakage of conditioned air.

**Flex Duct** – Should not be used for runs more than 8 feet in length.

**Radiators** – Incorporating traditional cast-iron radiators into a heating system can be done with gas boiler systems. Additional ducting is needed to provide the cooling as well to the home.

**High Velocity Ducting** – High Velocity Central Heating and Air Conditioning - An ideal solution for homes with radiator or baseboard heat, A Unique Indoor Comfort high velocity system fits any home no matter the age or construction. From restored barns, to simple colonials, to contemporary custom homes, high velocity provides comfort without the disruption of major renovations. Cool air is delivered through 2 inch flexible ducts designed and engineered to be installed into existing homes. There are no unsightly, exposed ducts. The compact air handler can be installed in attics, basements, crawlspaces, or even closets, allowing the design to meet almost any challenge.
